Course title		ECTS code	
Drug design		13.3.1217	
Name of unit administrating study			
null			
Studies			
faculty	field of study	type	drugiego stopnia
Wydział Chemii	Biznes chemiczny	form	stacjonarne
		specjalty	wszystkie
		specialization	wszystkie
Wydział Chemii	Chemia	type	drugiego stopnia
		form	stacjonarne
		specjalty	wszystkie
Wydział Chemii	Ochrona środowiska	specjalization	wszystkie
		type	drugiego stopnia
		form	stacjonarne
		specjalty	wszystkie
		specialization	wszystkie
Teaching staff			
dr hab. Elżbieta Jankowska, profesor uczelni; dr Julia Witkowska			
Forms of classes, the realization and number of hours		ECTS credits	
Forms of classes		2 classes - 15 h tutorial classes - 15 h student's own work - 20 h TOTAL: 50 h - 2 ECTS	
Lecture			
The realization of activities			
classroom instruction			
Number of hours			
Lecture: 15 hours			
The academic cycle			
2024/2025 winter semester			
Type of course		Language of instruction	
an elective course		English	
Teaching methods		Form and method of assessment and basic criteria for evaluation or examination requirements	
Lecture with multimedia presentation of basic issues in the drug discovery process		Final evaluation	
		Graded credit	
		Assessment methods	
		Exam with closed (test) and open questions	
		The basic criteria for evaluation	
		Achievement of at least 51 % of the total number of points from the written exam	
Method of verifying required learning outcomes			
Required courses and introductory requirements			
A. Formal requirements			
lack			
B. Prerequisites			
lack			
Aims of education			
The aim of the lecture is to familiarize students with the challenges faced by scientists and pharmaceutical companies involved in drug discovery. The skills and tools that chemists can use to support the drug design process will also be indicated.			
Course contents			

<p>the drug discovery process (identification and validation of targets, structure-based drug design, lead identification and optimization, preclinical and clinical trials, drug approval and marketing)</p> <p>basic pharmacokinetic properties of drugs (Lipinski rule of five)</p> <p>drug absorption, distribution, metabolism, and excretion (ADME)</p> <p>drug potency, stability and toxicity</p> <p>antibacterial, antiviral and anti-cancer drugs</p> <p>nature as a drug source</p> <p>the art of transforming peptides into drugs, bioisosterism in a drug design process</p> <p>proteins and antibodies as biological drugs</p> <p>prodrugs in contemporary drug design</p> <p>economic aspects in drug discovery</p>	
<p>Bibliography of literature</p> <p>Literature required to pass the course</p> <p>monographic materials provided by the teacher</p> <p>scientific papers indicated by the teacher</p> <p>Extracurricular readings</p> <p>Valko K., Physicochemical and biomimetic properties in drug discovery, Wiley 2014</p> <p>Textbook of drug design and discovery, Stromgaard K., Krosggaard-Larsen P., Madsen U. (Eds.), CRC Press 2016</p> <p>Ng R., Drugs: from discovery to approval, Wiley-Blackwell 2015</p> <p>Trabocchi A., Guarna A., Peptidomimetics in organic and medicinal chemistry, Wiley 2014</p> <p>Bioisosters in medicinal chemistry, Brown N. (Ed.), Wiley-VCH 2012</p>	
<p>The learning outcomes (for the field of study and specialization)</p> <p>Chemistry:</p> <p>K_W05: has extended knowledge in the field of the specialization studied</p> <p>K_W11: demonstrates in-depth knowledge about the current trends in the development of chemistry as a science and the latest discoveries in this field</p> <p>K_U04: applies acquired knowledge of chemistry and related scientific disciplines</p> <p>K_U10: reads with understanding scientific and popular science chemical texts in English</p> <p>K_K05: understands the need for independent search of information in scientific literature and popular science magazines</p> <p>Chemical Business:</p> <p>K_BChII_W05: knows and understands the main directions of the development of chemistry combined with economics as two interpenetrating scientific disciplines</p> <p>K_BChII_U01: based on the acquired knowledge is able to propose a solution to problems in chemistry, taking into account the economic aspect, using advanced measurement and analytical techniques</p> <p>K_BChII_K03: is willing to critically assess the level of his/her own knowledge in the light of the achievements of the studied scientific discipline</p> <p>Environmental Protection:</p> <p>K_OŚII_W01: describes in an in-depth manner complex phenomena and processes occurring in nature, including those related to the spread of anthropogenic pollution</p> <p>K_OŚII_U06: defines her/his interests and develops them within the chosen specialization and themes of her/his master's thesis while implementing the process of self-education and planning own future career</p> <p>K_OŚII_K10: has a need for continuous professional development</p>	<p>Knowledge</p> <p>Students:</p> <p>describe the main stages of drug design</p> <p>indicate the most important problems encountered at each stage of drug discovery</p> <p>describe target and lead identification processes</p> <p>list and characterize the properties modified in the lead optimization process</p> <p>describe the advantages and disadvantages of low-molecular, peptide and protein drugs, including their impact on environment pollution</p> <p>characterize the differences in antibacterial, antiviral and anti-cancer drug design</p> <p>list the components of costs generated in the drug search process</p> <p>describe the achievements and challenges of contemporary drug design</p>
	<p>Skills</p> <p>Students:</p> <p>describes with understanding methods for determining and modifying the properties of potential drugs</p> <p>propose alternative solutions to economic problems encountered at each stage of drug discovery</p>
	<p>Social competence</p> <p>Students understand the importance of self-learning and rising their competences</p>
