ype of course	Language of instruction		
an elective course	English		
reaching methods - During the auditorium classes students will learn about the different aspects of chemical kinetics and solve different exercises faced by the teacher (on the board and individually in the notebooks). - Lecture with the use of the multimedia presentation on the basic issues of chemical kinetics - Practical laboratory work - chemical experiments, analysis of obtained results and discussion.	English Form and method of assessment and basic criteria for eveluation or examination requirements Final evaluation Graded credit Assessment methods short test and report from laboratory work The basic criteria for evaluation		

Lecture, Auditorium classes, Laboratory classes: positive note from an short test with 3-6 open questions:

91-100% 5.0 81-90% 4.5 71-80% 4.0 61-70% 3.5 51-60% 3.0 < 51% 2.0

- passing short test covering the material of the Lecture, Auditorium classes, Laboratory classes
- assessment criteria in accordance with the University of Gdańsk Study Regulations

Method of verifying required learning outcomes

Required courses and introductory requirements

A. Formal requirements

lack

B. Prerequisites

lack

Aims of education

familiarize students with the main aspects of chemical kinetics

- familiarize students with the Determining the rate law of a reaction
- presenting the basis of chemical kinetics calculations
- familiarize students with the factors influencing the reaction rate

Course contents

Introduction to Chemical Kinetics, the rate of reaction, stoichiometry and order, zero order reactions, first order reactions, second order reactions, determination of reaction order, and effect of factors on the rate of chemical reactions. Practical chemical kinetics in solution. The material that will be covered in this subject is intended to provide you with the tools and understanding to handle basic problems involving chemical systems of simple chemical reactions. Exercises (4 h). Methods of Determining Reaction Order (Zeroth-Order Reactions, First-Order Reactions, Second-Order Reactions. Determining the rate law of a reaction. Laboratory (7 h). The effect of the concentration and temperature on reaction rate in simple chemical reactions occurring in aqueous solutions.

Bibliography of literature

Literature required to pass the course

- 1. Wright Margaret Robson, Introduction to Chemical Kinetics, John Wiley and Sons Ltd
- $2. \ Soustelle \ Michel, \ An \ Introduction \ to \ Chemical \ Kinetics, \ John \ Wiley \ and \ Sons \ Ltd$
- 3. Marin, Guy B., Kinetics of Chemical Reactions, Wiley-VCH GmbH

Extracurricular readings

1. Turányi, Tamás, Analysis of Kinetic Reaction Mechanisms, Springer-Verlag GmbH

The learning outcomes (for the field of study and specialization)

Chemical Business:

K_BCh_W01

describes in an advanced level the relationship between the economy and the functioning of the chemical industry $\rm K_BCh_W03$

describes in an advanced level the techniques of higher mathematics and IT tools necessary to describe and model chemical phenomena and technological processes K_BCh_U08

uses the chemical nomenclature and engineering terminology properly

Chemistry:

K_W02

describes in an advanced level the properties of elements and the most important chemical compounds, enumerates the methods of their preparation and methods of analysis

Knowledge

Students: know formulate definition of reaction rate and know examples of chemical reactions that occur at different rates, identify variables used to monitor reaction rates (i.e change per unit of time, Dx/Dt). Examples: pressure, temperature, pH., know the definitions: zero order reactions, first order reactions, second order reactions, are able to determine the sequence of reactions and are able to assess the influence of factors on the rate of chemical reactions, know main techniques of calculations in chemical kinetics.

Skills

Students should be able to:

- explain how a change in concentration, change in temperature, change in pH or a change in pressure influences the rate of a reaction.
- to determine the order of reaction
- determine the value of the rate constant
- fitting the reaction model to the experimental values.

Social competence

- is active in extending knowledge and understands the need for continuous education

K_W08

demonstrates knowledge of computational methods to solve problems in chemistry, physics, mathematics

K_W10

enumerates and describes the aspects of the construction, operation and use of measuring apparatus and equipment used in experimental works in the field of chemistry and related sciences

K U01

identifies, analyses and solves problems in the field of broadly understood chemistry on the basis of the acquired knowledge

K_U08

presents in an understandable way the facts about chemistry using a scientific language typical of chemical sciences

K U09

is able to learn independently

K K06

raises her/his professional and personal competences by using information provided in various sources

Environmental Protection:

K OŚI W01

describes in an advanced level physical, chemical and biological phenomena occurring in nature as well as geological, geomorphological and climatic conditions of the functioning of nature

K_OŚI_U04

uses specialist language in the discussion and properly uses the nomenclature in the field of environmental protection and individual disciplines related to it

prepares in Polish/English a short description of research, observation or problem task carried out during classes using appropriate scientific terminology

K_OŚI_K05

identifies the level of her/his knowledge and skills, demonstrates the need to update knowledge about the environment and its protection, demonstrates the need for continuous professional training and personal development K OŚI K08

is responsible for and takes care of the specialist equipment entrusted to her/him for research and laboratory or field work

- undertakes to work with a new topic or technique
- engages in scientific discussions
- understands the need to read scientific and popular science journals in order to expand and deepen knowledge
- understands the need for lifelong learning, recognizing self-education as a standard and condition for success on the labor market and achieving professional success
