

KAPITAŁ LUDZKI
 NARODOWA STRATEGIA SPÓJNOŚCI

 Projekt współfinansowany przez
 Unię Europejską w ramach
 Europejskiego Funduszu
 Społecznego

UNIA EUROPEJSKA
 EUROPEJSKI
 FUNDUSZ SPOŁECZNY

| | | | |
|------------------------------------------------------------------------------|-----------------------|----------------------------------------------------------------------------------------------------|------------------|
| Course title | | ECTS code | |
| Radiochemical methods and radiometric techniques for environment | | 13.3.1224 | |
| Name of unit administrating study | | | |
| null | | | |
| Studies | | | |
| faculty | field of study | type | drugiego stopnia |
| Wydział Chemii | Biznes chemiczny | form | stacjonarne |
| | | specjalty | wszystkie |
| | | specialization | wszystkie |
| | | type | drugiego stopnia |
| Wydział Chemii | Chemia | form | stacjonarne |
| | | specjalty | wszystkie |
| | | specialization | wszystkie |
| | | type | drugiego stopnia |
| Wydział Chemii | Ochrona środowiska | form | stacjonarne |
| | | specjalty | wszystkie |
| | | specialization | wszystkie |
| | | type | drugiego stopnia |
| Teaching staff | | | |
| dr hab. Dagmara Strumińska-Parulska, profesor uczelni; dr Grzegorz Olszewski | | | |
| Forms of classes, the realization and number of hours | | ECTS credits | |
| Forms of classes | | 2 | |
| Lecture | | | |
| The realization of activities | | | |
| classroom instruction, online classes | | | |
| Number of hours | | | |
| Lecture: 15 hours | | | |
| The academic cycle | | | |
| 2024/2025 winter semester | | | |
| Type of course | | Language of instruction | |
| an elective course | | English | |
| Teaching methods | | Form and method of assessment and basic criteria for evaluation or examination requirements | |
| Lecture based on the multimedia presentation – in-class or online learning | | Final evaluation | |
| | | Graded credit | |
| | | Assessment methods | |
| | | exam | |
| | | The basic criteria for evaluation | |
| | | The criteria according to UG regulations for students | |
| Method of verifying required learning outcomes | | | |
| Online test with 10 questions. Note based on the exam results. | | | |
| Required courses and introductory requirements | | | |
| A. Formal requirements | | | |
| no formal requirements | | | |
| B. Prerequisites | | | |
| no formal requirements | | | |
| Aims of education | | | |
| Familiarize students with the topics of the course content. | | | |

| Course contents | |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>Ionizing radiation and nuclear reactions. Radiometric and non-radiometric techniques in radionuclides determination. Nuclear chemistry in trace analysis: alpha, beta and gamma spectrometry. Neutron activation analysis. Environmental samples preparation for radiochemical analysis. Radioanalytical tracers. Radionuclides concentration: digestion and coprecipitation. Radioactive elements separation and purification. Sequential analysis. Radioisotopes activities calculations. Validation. Reference materials. Calibration.</p> | |
| Bibliography of literature | |
| <p>Literature required to pass the course Lecture content L'Annunziata M., Handbook of Radioactivity Analysis, Elsevier, 2012 Extracurricular readings Magil J., Galy J., Radioactivity · Radionuclides · Radiation, Springer, 2005</p> | |
| The learning outcomes (for the field of study and specialization) | Knowledge |
| <p>Chemical Business: K_BChII_W02: knows and understands the axiological conditions regarding the use of modern techniques and measuring instruments as well as IT tools in chemistry, taking into account economic aspects K_BChII_U02: is able to define his/her interests, develop them within the chosen field of study and in connection with the subject of the master's thesis by implementing the process of self-education and planning his/her professional career K_BChII_U03: is able to present, based on the current state of knowledge, scientific discoveries and the results of own research in the field of chemical and economic sciences, through skilful debate and public speeches K_BChII_K03: is willing to critically assess the level of his/her own knowledge in the light of the achievements of the studied scientific discipline K_BChII_K04: is willing to properly assess the acquired knowledge, respect it and disseminate it in order to solve specific cognitive and practical issues K_BChII_K05: is willing to act independently for the environment in order to fulfill certain social obligations</p> <p>Chemistry: K_W03: demonstrates in-depth knowledge in the field of modern measuring techniques used in chemical analysis K_W05: has extended knowledge in the field of the specialisation studied K_U03: finds necessary information in specialist literature, databases and other sources, lists basic scientific journals in chemistry K_U04: applies acquired knowledge of chemistry and related scientific disciplines K_U07: defines and implements the directions of own further education K_K01: knows the limitations of her/his own knowledge; understands the need for further education and can inspire other people to do so K_K03: understands the need for systematic work on various projects of a long-term nature and knows how to set priorities for the implementation of undertaken tasks K_K06: undertakes research tasks consciously and responsibly, understanding the social aspects of the practical application of the acquired knowledge and skills and the responsibility related to it</p> <p>Environmental Protection:</p> | <p>knows and understands the basic concepts of radiochemistry, 2. knows basic non-radiometric and radiometric techniques used in radionuclides determination, 3. understands the concept of alpha, beta and gamma spectrometry, 4. has knowledge on the neutron activation analysis, 5. has knowledge about the environmental samples preparation, 6. understands the concept of radioanalytical tracers, 7. knows how to digest, separate and purify some radioactive elements.</p> <p>Skills</p> <p>1. understands the concepts of radiometric methods, 2. recognizes the most important spectrometry techniques: alpha, beta, gamma, 3. can present the sequential radiochemical analysis, 4. is able to calculate radioisotopes activities and activity concentrations,</p> <p>Social competence</p> <p>1. understands the need for further education in the field of radiochemical analysis, 2. demonstrates creativity in designing the sequential analysis for different elements, 3. can transfer knowledge in the society about sources of radiochemical method used in industry and everyday life,</p> |
